You are required to show your work on each problem on this exam. The following rules apply:

- Organize your work, in a reasonably neat and coherent way, in the space provided.
- No partial credit for any 1 point problem. A correct answer, unsupported by calculations, explanation, or algebraic work will receive no credit.
- If you need more space, use the back of the pages; clearly indicate when you have done this.
- Any answer or solution on scratch paper will receive no credit.

Do not write in the table to the right.

Your section number: \_

- 1. Determine which of the following transformations with domain  $P_2$ , the space of all polynomials of degree at most 2, is a linear **transformation**. Remember to justify your answers.
  - (a) (1 point)  $T_1: P_2 \to \mathbb{R}^4$  defined by  $T_1(p) = (p(1), p(2), p(3), p(4))$ .

(b) (1 point)  $T_2: P_2 \to \mathbb{R}^3$  defined by  $T_2(p) = (p(0), p'(0), p''(0))$ .

(c) (1 point)  $T_3: P_2 \to \mathbb{R}^3$  defined by  $T_3(p) = (p(1) + 2, (p(0))^3, p'(0)).$ 

(d) (1 point)  $T_4: P_2 \to P_2$  defined by  $T_4(p)(x) = xp'(x)$ .

2. (a) (3 points) Let  $\mathbb{R}^{2\times 2}$  to be the space of  $2\times 2$  matrices and consider the ordered basis  $\mathcal{B}$  of  $\mathbb{R}^{2\times 2}$ ,

$$\mathcal{B} = \left( \begin{bmatrix} 1 & 1 \\ 0 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 1 \\ 1 & 0 \end{bmatrix}, \begin{bmatrix} 0 & 0 \\ 1 & 1 \end{bmatrix}, \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} \right).$$

For the linear transformation  $T: \mathbb{R}^{2\times 2} \to \mathbb{R}^{2\times 2}$  defined by

$$T(A) = \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix} A - A \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix},$$

determine  $[T]_{\mathcal{B}}$ , the  $\mathcal{B}$ -matrix of T.

(b) (2 points) Find a basis of  $\operatorname{im}(T) \subset \mathbb{R}^{2 \times 2}$ .

3. (a) (3 points) Perform the Gram-Schmidt process to  $v_1, v_2 \in \mathbb{R}^4$ ,  $v_1 = (1, 2, 3, 4)$ ,  $v_2 = (4, 3, 2, 1)$ , and find the corresponding QR factorization of the matrix

$$M = \begin{bmatrix} 1 & 4 \\ 2 & 3 \\ 3 & 2 \\ 4 & 1 \end{bmatrix}$$

(b) (3 points) Compute the  $4\times4$  matrix (with respect to the standard basis) for the orthogonal projection onto the plane spanned by the vectors  $\mathbf{v}_1$  and  $\mathbf{v}_2$  above.

4. (a) (3 points) Can you find a  $2019 \times 2019$  matrix A such that  $im(A^2) = ker(A^2)$ ? If so, please give an example; otherwise please explain why.

(b) (1 point) Can you find a  $4 \times 4$  matrix A such that  $\operatorname{im}(A^2) = \ker(A^2)$ ? If so, please give an example; otherwise please explain why.

(c) (1 point) Let  $P_{=2}$  be the space of all polynomials of exactly degree 2. Prove or disprove:  $P_{=2}$  is a linear space.

Please estimate your score. You can also provide your suggestion for the course here.
